

TCS AI FRIDAYS HACKATHON

CivicAI

AI-Powered Public Service Chatbot for Citizen Query Resolution

Problem Statement: AI-Powered Public Service Chatbot for Citizen Query Resolution

Built with: Claude (Anthropic) · OpenAI GPT-4o · Gemini · HTML/JS

5 MIN DEMO

High Call Volume

Public service departments receive thousands of repetitive inquiries daily about procedures, documents & statuses.

Slow Response Times

Human agents struggle to keep pace, causing citizen frustration and long wait times for simple answers.

Static FAQs Fail

Web-based FAQ pages cannot answer natural language questions dynamically, limiting their usefulness.

Complex Integrations

Existing chatbot solutions require extensive training data and complex integrations, slowing deployment.

There is strong demand for a generative AI chatbot that understands natural language and delivers accurate, context-aware answers from public service documentation.

CivicAI

A single-file, browser-based AI chatbot that resolves citizen queries instantly using a structured knowledge base and a generative LLM API.

LIVE DEMO

Demo Flow · 2 minutes

1

Open the HTML file in browser — no install, no server

2

Switch Knowledge Base → Building Permits

3

Type: 'How do I apply for a building permit?'

4

Show AI response grounded in permit knowledge base

5

Use a Quick Topic chip → Property Tax query

6

Show query counter & avg response time updating live

Hackathon Evaluation Criteria — Compliance

✓	Working application delivered	Single HTML file — open and run instantly
✓	Creativity & innovation	Multi-provider AI switching; no-install deployment
✓	Responsible AI / data ethics	No personal data; LLM grounded to knowledge base
✓	Participation & demonstration	Live demo with real queries and visible metrics

CONCLUSION

- CivicAI demonstrates that a generative AI chatbot can be deployed instantly — no server, no complex integration.
- A modular knowledge base architecture ensures answers are grounded, accurate, and easily expandable.
- Three LLM provider options make the solution adaptable to any infrastructure environment.
- Target: 80%+ query resolution accuracy with ~2s response time.

Future Enhancements

- Real PDF/HTML document ingestion
- Multi-language citizen support
- Backend API + auth layer
- Analytics dashboard for query trends
